## Profile

Security-focused Software Engineer with a strong **Full-Stack background** (React.js, Node.js). Writing code since 2020; what started as curiosity evolved into a deep understanding of the software development lifecycle, eventually leading to a specialization in **Application Security**.

I leverage my hands-on development expertise to conduct deep **white-box testing**, perform **secure code reviews**, and design hardened runtime environments. Unlike traditional pentesters, I don't just find vulnerabilities; I understand their root cause in the code and engineer **secure-by-design** solutions.

## Skills

### AppSec & Security

Secure Code Review,  
OWASP Top 10, White-  
box Testing, Burp Suite,  
OWASP ZAP.

### Frontend Development

React.js, Next.js, Redux  
Toolkit, Tailwind CSS,  
HTML5/CSS3.

### Backend Development

Node.js, Express.js,  
MongoDB, PostgreSQL,  
Python (Basics).

### Tools & Environment

Docker, Trivy, Git,  
GitHub, Linux (Bash),  
Postman.

## Projects

### Hardened Node.js Runtime Environment

*Designed a secure containerization workflow for a Node.js application, focusing on attack surface reduction.*

- **Attack Surface Reduction:** Migrated to **Alpine Linux** (node:18-alpine), reducing image size by 60% and minimizing potential CVEs.
- **Least Privilege:** Configured the container to run as a **non-root user** to prevent privilege escalation attacks.
- **Vulnerability Management:** Integrated **Trivy** to scan for Critical/High vulnerabilities during the build process.
- **Secure Configuration:** Utilized **.dockerignore** to prevent sensitive file leaks (env vars) into production.

**Tech Stack:** Docker, Trivy, Linux, Node.js.

### The Wild Oasis (Hotel Management System)

*An internal hotel management system focusing on data integrity and secure role-based access.*

- Developed a performant SPA using **React.js** with a focus on secure component architecture.
- Implemented **Role-Based Access Control (RBAC)** via Supabase to ensure data privacy and authorized access.
- Handled secure remote state management using **React Query** to prevent data inconsistency bugs.
- Applied input validation patterns to protect against common data entry errors and anomalies.

**Tech Stack:** React.js, Supabase (Auth/DB), React Query.

### WorldWise (Travel Tracking App)

*An interactive travel tracking application visualizing user footprint on a global map.*

- Implemented **Protected Routes** to secure user-specific pages from unauthorized access.
- Managed global application state securely using **React Context API** to avoid prop-drilling vulnerabilities.
- Ensured safe integration with third-party APIs (Leaflet) by sanitizing coordinate inputs.

**Tech Stack:** React.js, Context API, CSS Modules.

## Education

### Bachelor of Technology and Development

Zagazig University

Major: Digital Marketing & Information Technology

Cumulative Grade: Very Good

09/2023 – Present

Zagazig, Egypt

## Languages

Arabic

English
